UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Subsidiary and Advanced Level

MARK SCHEME for the November 2004 question paper

9702 PHYSICS

9702/02

Paper 2 (Structured), maximum raw mark 60

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. This shows the basis on which Examiners were initially instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

• CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the November 2004 question papers for most IGCSE and GCE Advanced Level syllabuses.

Grade thresholds taken for Syllabus 9702 (Physics) in the November 2004 examination.

	maximum	minimum mark required for grade:			
	mark available	А	В	E	
Component 2	60	41	37	25	

The thresholds (minimum marks) for Grades C and D are normally set by dividing the mark range between the B and the E thresholds into three. For example, if the difference between the B and the E threshold is 24 marks, the C threshold is set 8 marks below the B threshold and the D threshold is set another 8 marks down. If dividing the interval by three results in a fraction of a mark, then the threshold is normally rounded down.

November 2004

GCE A AND AS LEVEL

MARK SCHEME

MAXIMUM MARK: 60

SYLLABUS/COMPONENT: 9702/02

PHYSICS
Paper 2 (Structured)

	i age i	A and AS LEVEL – NOVEMBER 2004	9702		2
1	(a) (i) e.g. ch	heck for zero error (on micrometer)/zero the micrometer	3702	B1	
	(ii) take re	(ii) take readings along the length of the wire/at different points			
	(iii) take re	eadings spirally/around the wire		В1	[3]
	(b) (i) 4%			A 1	
	(ii) 8%			A1	[2]
2	(a) all same s	speed in a vacuum (allow medium)/all travel in a vacuum	(1)		
	transverse	e/can be polarised	(1)		
	undergo d	diffraction/interference/superposition	(1)		
	can be re	flected/refracted	(1)		
	show prop	perties of particles	(1)		
	oscillating	g electric and magnetic fields	(1)		
	transfer e	nergy/progressive	(1)		
	not affecte	ed by electric and magnetic fields	(1)		
	(allow any	y three, 1 each)		В3	[3]
	(b) 495 nm =	495 x 10 ⁻⁹ m		C 1	
	number =	$1/(495 \times 10^{-9}) = 2.02 \times 10^{6}$		A1	[2]
	(allow 2 o	r more significant figures)			
	(c) (i) allow	$10^{-7} \rightarrow 10^{-11} \text{ m}$		В1	
	(ii) allow	$10^{-3} \rightarrow 10^{-6} \text{ m}$		В1	[2]
3	(a) constant (gradient/straight line		B1	[1]
	(b) (i) 1.2 s			A 1	
	(ii) 4.4 s			A 1	[2]
	(c) either use	e of area under line or h = average speed x time		C 1	
	h = 1	½ x (4.4 – 1.2) x 32		C1	
	=	51.2 m		A 1	[3]
	(allow 2/3	marks for determination of $h = 44$ m or $h = 58.4$ m			

Mark Scheme
