# UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS GCE Advanced Subsidiary Level and GCE Advanced Level

### MARK SCHEME for the June 2004 question papers

	9702 PHYSICS
9702/01	Paper 1 (Multiple Choice (AS)), maximum mark 40
9702/02	Paper 2 (Structured Questions (AS)), maximum mark 60
9702/03	Paper 3 (Practical (AS)), maximum mark 25
9702/04	Paper 4 (Structured Questions (A2 Core)), maximum mark 60
9702/05	Paper 5 (Practical (A2)), maximum mark 30
9702/06	Paper 6 (Options (A2)), maximum mark 40

These mark schemes are published as an aid to teachers and students, to indicate the requirements of the examination. They show the basis on which Examiners were initially instructed to award marks. They do not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the Report on the Examination.

• CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the June 2004 question papers for most IGCSE and GCE Advanced Level syllabuses.

Grade thresholds taken for Syllabus 9702 (Physics) in the June 2004 examination.

	maximum	minimum mark required for grade:			
	mark available	А	В	E	
Component 1	40	34	32	22	
Component 2	60	45	41	27	
Component 3	25	19	17	11	
Component 4	60	40	33	17	
Component 5	30	24	22	14	
Component 6	40	21	18	10	

The thresholds (minimum marks) for Grades C and D are normally set by dividing the mark range between the B and the E thresholds into three. For example, if the difference between the B and the E threshold is 24 marks, the C threshold is set 8 marks below the B threshold and the D threshold is set another 8 marks down. If dividing the interval by three results in a fraction of a mark, then the threshold is normally rounded down.

	A/AS LEVEL EXAMINATIONS - JUNE 2004	9702	02

#### **Categorisation of marks**

The marking scheme categorises marks on the MACB scheme.

B marks: These are awarded as <u>independent</u> marks, which do not depend on other marks. For a B-mark to be scored, the point to which it refers must be seen specifically in the candidate's answer.

M marks: These are <u>method</u> marks upon which A-marks (accuracy marks) later depend. For an M-mark to be scored, the point to which it refers must be seen in the candidate's answer. If a candidate fails to score a particular M-mark, then none of the dependent A-marks can be scored.

C marks: These are <u>compensatory</u> method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a C-mark and the candidate does not write down the actual equation but does correct working which shows he/she knew the equation, then the C-mark is awarded.

A marks: These are accuracy or <u>answer</u> marks which either depend on an M-mark, or allow a C-mark to be scored.

#### Conventions within the marking scheme

#### **BRACKETS**

Where brackets are shown in the marking scheme, the candidate is not required to give the bracketed information in order to earn the available marks.

#### **UNDERLINING**

In the marking scheme, underlining indicates information that is essential for marks to be awarded.

**MAXIMUM MARK: 25** 

SYLLABUS/COMPONENT: 9702/03

PHYSICS Paper 3 (Practical (AS))

		A/AS LLVLE LAAMINATIONS - SOIL 2004 9102	
(a)		Pointer B reading to the nearest half millimetre or millimetre	1
		Extension correct and to nearest millimetre Condone negative values (i.e. do not penalise 'upside down' rule)	
(b)		Calculation of spring constant to 2 or 3 sf $k = 0.98/x$ answer must be given in N m <sup>-1</sup> . Ignore any negative signs. Do not allow fractions	1
(c)	(i)	Diameter of one mass to at least 3 sf Accept value ± 0.2 mm of Supervisor's value	1
	(ii)	Percentage uncertainty in diameter One mark for $\Delta d$ (either 0.1 mm or 0.2 mm). One mark for correct ratio and multiplication by 100.	2
	(iii)	Cross-sectional area One mark for $A = \pi r^2$ . One mark for correct substitution into $A = \pi r^2$ . ECF from <b>(c)(i)</b> . Do not allow the second mark if diameter substituted into $A = \pi r^2$ . Wrong formula scores zero in this section.	2
(d)	(iv)	Measurements Expect to see six sets of results in the table (one mark).  I must be correct; check a value (one mark).  If correct, then tick. If incorrect, then do not award the second mark, and write in the correct value. If pointer reading not shown then this mark cannot be scored. Minor help given by Supervisor, -1. Major help, then -2.	2
		Column headings for $d$ and $l$ (one mark for each correct heading). Expect to see a quantity and a correct unit. There must be a distinguishing feature between the quantity and the unit.	2
		Consistency of $d$ and $l$ readings. Values should be given to the nearest mm. One mark each.	2
(e)	(iii)	Gradient is negative.  No ecf from misread rule if gradient is positive.	1
		Gradient calculation. $\Delta$ used must be greater than half the length of the drawn line. Check the read-offs (must be correct to half a small square). Ratio must be correct (i.e. $\Delta y/\Delta x$ and not $\Delta x/\Delta y$ ).	1
Gra	oh	Axes Scales must be such that the plotted points occupy at least half the graph grid in both the <i>x</i> and <i>y</i> directions (i.e. at least 6 large squares on the longer side of the grid and at least 4 squares on the shorter side of the grid). Scales must be labelled. Do not allow awkward scales (e.g. 3:10, 6:10 etc.). Allow reversed axes (penalise in section <b>(f)</b> )	1
		Plotting of points Count the number of plots and write as a ringed total on the graph grid. All the observations must be plotted or this mark cannot be scored. Check a suspect plot. Circle and tick if correct. If incorrect, show correct position with arrow, and -1. Work to half a small square.	1
		Line of best fit There must be at least 5 trend plots for this mark to be scored. There must be a reasonable balance of points about the line of best fit.	1

Mark Scheme
A/AS LEVEL EXAMINATIONS - JUNE 2004

Page 1

Syllabus 9702 Paper 03

	Curved trend cannot score this mark.  Quality of results  Judge by scatter of points about the line of best fit.  There must be at least 5 trend plots for this mark to be scored.  Incorrect trend (i.e. positive gradient) will not score this mark.	1
(f)	Gradient equated with $\frac{-\rho_{\scriptscriptstyle W} Ag}{k}$ . Condone misuse of negative sign.	1
	Value in range 800 – 1200 kg m <sup>-3</sup> (or 0.80 to 1.20g cm <sup>-3</sup> ) This mark cannot be scored if the gradient has not been used. This mark will not be scored if there is a Power Of Ten error in the worki reversed axes.	1 ng or
	Unit correct (kg m <sup>-3</sup> ) If another unit has been given then it must be consistent with the value.	1
	Significant figures in $\rho_{\rm w}$ Accept 2 or 3 sf only. Ignore trailing zeros (except $\rho_{\rm w}$ = 1000)	1
(g)	Difficulty e.g. hard to see the water surface/surface tension problems/refraction effects/parallax errors. Do not allow vague 'human error'.	1
	Improvement e.g. use calibrated beakers or masses/paper behind/mirror behind/trave microscope Do not allow 'use dye'/repeat readings.	1 Iling

Onl This The	s mark ca ere must b	it straight line through a linear trend is allowable for this mark. n only be awarded for 5 or more plots on the grid. See a reasonable balance of points about the drawn line. In a line of thickness greater than half a small square.		1
ud tre	end plots s mark ca	cults about the line of best fit. can score this mark. Curved trend scores zero. In only be scored if a graph of $d^2$ against $T^2d$ or $d^2$ has been plotted.		1
Igno Hyp Che	ootenuse o	nits given with the value. of $\Delta$ must be > half the length of line drawn. ad-offs. Work to half a small square. $\Delta x/\Delta y$ gets zero. from the table that lie on the line to within half a small square are acc	ceptable.	1
The		ust be read to the nearest half square. tion from $y = mx + c$		1

(c) k = gradient of line of best fit

A numerical value is expected. Substitution method scores zero.

A = candidate's value for the *y*-intercept

1

1

A numerical value is expected. Substitution method scores zero.

Unit of A correct and consistent with value (e.g. s<sup>2</sup> m or s<sup>2</sup> cm)

1

If incorrect allow ecf from column heading in table.

(d) Value of T when d = 1.0 cm

1

Must be in range 3 - 8 s.

A power of ten error anywhere in the working will result in this mark not being scored.

Working must be checked. Bald answer scores zero.

20 marks in total

	A/AS LEVEL EXAMINATIONS - JUNE 2003	9702	05

#### Question 2

A1	Sensible choice of equipment and basic idea OK Source/magnetic field/detector Inappropriate choice of apparatus cannot score this mark. Ignore lead or aluminium plates at this stage.	1
A2	Method of measuring angle of deflection (e.g. detector at edge of large protractor/lengths & trig ratio used) Do not allow vague 'use a protractor'. This mark can be awarded even if the detector has not been specified.	1
А3	Use Hall probe/search coil/current balance to measure field strength Allow Helmholtz coils expression if Helmholtz coils used. Allow a current or voltage measurement as indication of field strength (as $I \alpha B$ )	1
B1	Method of removing $\alpha$ radiation or statement that $\alpha$ radiation almost undeflected Use paper or distance to detector > few cm/air to absorb alpha Could be shown on the diagram. Do not allow lead/aluminium plate. Allow $\alpha$ to be shown deflecting in the opposite direction to $\beta$ on the diagram.	1
B2	$\gamma$ -radiation undeflected/deflect beta particles using electric field Can be shown on diagram. Do not allow 'absorb gamma with lead plate'.	1
В3	Workable procedure for uniform fields Measure deflection and field strength; change current in coils and repeat.	1
C1/2	Any two safety precautions e.g. use source handling tool store source in lead lined box when not in use do not point source at people/do not look directly at source place lead sheet at 'end of experiment' to absorb unwanted rays	2
D1/2	Any good/further detail. Examples of creditworthy points might be: Type of detector (GM tube/film/screen/scintillation counter). N/a cloud chamber/CRO Repeat readings to allow for randomness of activity Correct deflection of beta on diagram/left hand rule ideas (diagram or written) Separation of coils = radius of coils for uniform field Discussion of count rate (and not just count) Plane of semiconductor slice is perpendicular to field lines Calibrate Hall probe Detail of calibration Collimation ideas Allow other valid points. Any two, one mark each. B1 = B2 = B3 = 0 if lead or aluminium plate is placed in front of the source. Allow thin (less than 1 mm) sheet or foil	2

PHYSICS Paper 6 (Options (A2))

Page 1	Mark Scheme	Syllabus	Paper
	A/AS LEVEL EXAMINATIONS - JUNE 2004	9702	06

#### **Categorisation of marks**

The marking scheme categorises marks on the MACB scheme.

B marks: These are awarded as <u>independent</u> marks, which do not depend on other marks. For a B-mark to be scored, the point to which it refers must be seen specifically in the candidate's answer.

M marks: These are <u>method</u> marks upon which A-marks (accuracy marks) later depend. For an M-mark to be scored, the point to which it refers must be seen in the candidate's answer. If a candidate fails to score a particular M-mark, then none of the dependent A-marks can be scored.

C marks: These are <u>compensatory</u> method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a C-mark and the candidate does not write down the actual equation but does correct working which shows he/she knew the equation, then the C-mark is awarded.

A marks: These are accuracy or <u>answer</u> marks which either depend on an M-mark, or allow a C-mark to be scored.

#### Conventions within the marking scheme

#### **BRACKETS**

Where brackets are shown in the marking scheme, the candidate is not required to give the bracketed information in order to earn the available marks.

#### **UNDERLINING**

In the marking scheme, underlining indicates information that is essential for marks to be awarded.

	A/AS LEVEL EXAMINATIONS - JUNE 2004	9702	06

# Option A – Astrophysics and Cosmology

1	(a)	In an infinite and static Universe every line of sight should end on a star (or spherical shells argument) so sky at night should be bright		M1 M1	[3]
	(b)	For expanding Universe finite age limits size (1) light from distant galaxies is red-shifted out of visible light from distant young stars not yet reached Earth Any two points, maximum 2 (1)		B2	[2]
2	(a)	1 pc = 3.26 ly (allow 3.3 ly) distance = 16/3.26 = 4.9 pc	Total	C1 A1	[5] [2]
	(b)	base line is 2 AU angle = 2 x 1/4.9 = 0.41 arc sec	Tatal	C1 B1	[2]
3	(a)	Universe is same everywhere/homogeneous/isotropic when considered on a sufficiently large scale	Total	M1 A1	[4] [2]
	(b)	characteristic of (black body) 3 K radiation CMB is highly isotropic/same from all directions This indicates that the Universe is highly uniform	Total	B1 M1 A1	[3] [5]
4	(a)	e.g. planet observed by reflected light this is too faint (against the starlight) e.g. physically too small to be resolved (at such great distances) (any sensible suggestion (B1) with some further comment (B1) – I		B1 B1 B1 B1	[4]
	(b)	e.g. change in intensity of starlight as the star is eclipsed e.g. wobble in position of star (M1) as planet orbits star (A1) (any sensible suggestion plus some further comment – max 2)		M1 A2	[2]
Opt	tion F – The P	hysics of Fluids	Total		[6]
5	(a)	force = upthrust – weight of polystyrene in air $25 = V \times (1000 - 15) \times 9.8$ $V = 2.6 \times 10^{-3} \text{ m}^3$		C1 C1 A1	[3]
	(b)	boat will tend to right itself/float higher in the water if at positions B	Tatal	M1 A1	[2]
6	(a)	if air is streamline air above car moves faster than air below so (by Bernoulli) pressure above is lower than below and car experiences an upward force	Total	B1 M1 M1 A1	[5] [4]
	(b)	the spoiler causes turbulence turbulence prevents the lift force from developing	Total	M1 A1	[2] [6]

(b) (i) force on particle = 4/3 πτ² (ρ - ρ, μ) g = 4/3 x π (4.5 x 10² γ² x (2.9 x 10³) x 9.8 = 1.98(5) x 10² 4 π x (4.5 x 10² γ² x (2.9 x 10³) x 9.8 = 1.98(5) x 10² 4 π x x (4.5 x 10² 4 x x x x (4.5 x 10² 4 x x x x x (4.5 x 10² 4 x x x x x x x x x x x x x x x x x x		Page 3	3		Syllabus	Pap
