W. Hireman and Albert

CAMBRIDGE INTERNATIONAL EXAMINATIONS

NOVEMBER 2002

GCE Advanced Subsidiary Level

MARK SCHEME

MAXIMUM MARK: 40

SYLLABUS/COMPONENT:9702/6

PHYSICS (OPTIONS (A2))

Page 1 of 5	Mark Scheme	Syllabus	Paper
	A Level Examinations – November 2002	9702	6

Option A

1	(a)		allow 4 – 15 minutes	B1	[1]
	(b)		allow 2 – 8 years	B1	[1]
	(c)		allow 50 k – 150 k years	B1	[1]
-	r		(If all else fails allow 1 mark for units of minutes, years and k years))	
				·	~
2	(a)		relative motion between source and observer	A 1	[3]
			(due to) receaming source		[~]
	(b)		all wavelengths are shifted so UV becomes visible or visible becomes IR alternative: line gives a reference (1) so that shift can be measured (1)	B1 B1	[2]
	(c)		e.g. light pollution absorption irregular refraction etc any three, 1 each	B3	[3]
			mregami formetion ote any three, i each	D3	[-]
3	(a)		$H_0 = 1/(4.1 \times 10^{17}) = 2.4 \times 10^{-18} \text{ s}^{-1}$ $\rho_0 = \{3 \times (2.4 \times 10^{-18})^2\} / \{8 \times \pi \times 6.67 \times 10^{-11}\}$	C1 C1	
			$= 1.06 \times 10^{-26} \text{ kg m}^{-3}$	C1	
			idea of divide density by $1.66 \times 10^{-27} (1 \ u)$	C 1	
			number density = 6.4	A 1	[5]
	(b)	(i)	mention of dark matter	B1	
			limit of observable Universe	B1	
		(ii)	(allow alternatives to max 2) expansion will come to a halt	B1	
		(u)	then collapse	B1	[4]

Page 2 of 5	Mark Scheme	Syllabus	Paper
	A Level Examinations – November 2002	9702	6

Option F

4	(a)	force (on body) acting upwards	B 1	[1]
÷'	(b)	pressure below object is different from pressure above	B1 B1	[2]
	(c)	upthrust depends on $\Delta p = \rho g \Delta h$ OR upthrust = weight of fluid displaced	B1	
		incompressible fluid OR a constant	R1	
		incompressible fluid OR ρ constant rigid object (so volume not change)	B1	[3]
5	(a) (i) (ii)	path taken by (a particle of) the fluid tube of fluid bounded by streamlines	B1 B1	
	(iii)	streamlines would be crossed by the fluid or streamlines would not be in direction of flow of fluid	B 1	[3]
	(b) (i)	sketch: smooth lines	M1 A1	
	(ii) (iii)		B1	
		OR increased viscosity	B1	[4]
6	(a) (i)	friction between layers of fluid	B 1	
		fluid in contact with sides is stationary	B 1	
	(ii)	rate of change of velocity with distance	B1	E 43
		normal to direction of flow of fluid	B 1	[4]
	(b)	speed = $(3 \times 10^{-3}) / (7 \times 24 \times 3600) = 4.96 \times 10^{-9} \text{ m s}^{-1}$	C 1	
		$1.5 = \eta \times 9.0 \times 10^{-4} \times (4.96 \times 10^{-9}) / (2.2 \times 10^{-6}) \qquad \dots$	C 1	
		$\eta = 7.4 \times 10^5 \mathrm{Pa}\mathrm{s} \dots$	A 1	[3]

Page 3 of 5	Mark Scheme	Syllabus	Paper
	A Level Examinations – November 2002	9702	6

Option M

7	(a)	sharpness: clear distinction between boundaries e.g. parallel X-ray beam / point source contrast: (large) differences in blackening of different regions (allow changes in colour)	B1 B1	T 43
÷		e.g. differences in attenuation coefficient	B1	[4]
	(b) (i)	max. energy of photon is 80 keVbelow 80 keV, continuous spectrum with sharp peaks	B1 B1	[2]
	(ii)	$I = I_0 e^{-\mu x}$	D 1	[2]
		$\frac{1}{2} = e^{-\mu}$ $\mu = 0.693 \text{ mm}^{-1}$	C1	
	(:::)	$\mu = 0.693 \text{ mm}^{-1}$	Al D1	[2]
	(111)	X-rays are more penetrating		[2]
8	(a)	ability of eye to form focused images of objects at different distances from eye		[2]
	(b)	star: power = $1/\infty + 1/L$ (<i>L</i> explained)	M1 M1 A1	[3]
9		changes in loudness perceived as $\Delta I/I$	B1	
		loudness is log. response to intensity	D1	
		OR loudness/sensitivity not linearly dependent on intensity and $I.L.$ measured as 10 $\lg(I/I_0)$	B1 B1	
		but perceived loudness depends on frequency		
		and on the individual	B 1	[5]

Page 4 of 5	Mark Scheme	Syllabus	Paper
	A Level Examinations – November 2002	9702	6

Option P

10	(a)	cell: conversion (of solar energy) to electrical energy panel: conversion (of solar energy) to thermal energy	B1 B1	[2]
-	(b) (i) (ii)	e.g. calculator, remote road signs d.c. not a.c. so problems re. distribution vast area of land would need to be covered OR		
		any other relevant qualitative statement (e.g. time of day!) for 1 kW need about 10 m ² OR for 240 V need several hundred cells in series	B1-	· .
		OR any other appropriate quantitative statement	B1	[4]
11	(a) (i) (ii)	correct direction round cycle(allow 3 arrows)	Bl Bl	[2]
	(b)	input with two output arrows		[3]
	(c) (i)	efficiency = (useful) output / input = 80 / 210	C1	
	(ii)	$= 38\%$ $E_{\text{max}} = (1 - T_{\text{L}}/T_{\text{H}})$ $T_{\text{L}} \text{ cannot be 0 K}$ $T_{\text{H}} \text{ has a practical upper limit}$	A1 B1 B1 B1	[5]
12		Electric cars produce less pollution at location electrical energy has to be generated (resulting in) pollution at power station any other suitable comment e.g. pollution in cities	B1 B1 B1 B1	[4]

Page 5 of 5	Mark Scheme	Syllabus	Paper
	A Level Examinations – November 2002	9702	6

Option T

13	(a)	series of pulses	B1 B1	[2]
÷	(b)	number of samples per second = $44100 \times 2 = 88200$ number of bits in 1 hour = $88200 \times 16 \times 3600 = 5.1 \times 10^9$	C1 A1	[2]
	(c)	adv: e.g. perfect regeneration possible, regeneration eliminates noise disadv: extra circuitry (ADC, DAC etc)	B1 B1	[2]
14	(a) (i) (ii)	area represents energy and some loss of light energy in the fibre difference in number of reflections along the fibre mean different path lengths	B1 B1 B1	[4]
	(b)	speed = $1400 / (7.0 \times 10^{-6})$		[4]
15	(a) (i) (ii)	allow 10 m - 100 m	B1 B1	[2]
	(b)	sky waves rely on ionospheric reflection ionosphere changes in height, density etc space waves used for satellite communication not affected by ionosphere (allow feasible alternatives e.g. effect of hills to max 4)	B1 .B1	[4]
